

Design & Technology

“Where everyone has a voice”

Design and Technology is taught to all pupils in all key stages here at Brackenfield. The Primary curriculum is based on exploration of the world around us, how things are made and how they function. The Secondary curriculum is delivered in purpose built Design and Technology rooms and covers Food Technology, Resistant Materials Technology (wood, metal and plastic) and textiles technology. Pupils who chose to can opt to follow an accredited course at KS4 in either Resistant Materials Technology or food Technology.

The Design Technology Curriculum which supports the content of the National Curriculum for Design and Technology, develops our pupils ability to problem solve, design and evaluate through a range of exciting, multi-sensory and multi-disciplined learning activities.
